

PRESS RELEASE

Rome, 24th July 2018

VIASAT AND INAZ TOGETHER FOR AN INTEGRATED MANAGEMENT OF FLEETS AND HUMAN RESOURCES

Viasat S.p.A. - European excellence in the field of satellite security solutions - and **Inaz** - an Italian company that specializes in coordinating, managing and organizing corporate work - join their skills and form a partnership aimed at providing the market with a combined range of **services dedicated to fleet management and to the intelligent automation of human resources.**

Viasat's experience with regard to Satellite Telematics solutions and Inaz's know-how with regard to the development of **software and solutions aimed at managing and coordinating human resources** lay the foundations for a cutting-edge technological suite, able to help companies reduce operating costs and constantly improve their service levels. This is the result: **iFMS (intelligent Fleet Monitoring Solutions) by Viasat and Inaz**, a simple and integrated solution that allows a 360° management of your fleet and workforce: localization and the geo-referenced management of vehicles through the **Viasat Fleet WebConsole** application; 24/7 assistance and protection thanks to the **Viasat Operations Center**; a web application for vehicle fleet management, for the monitoring of costs, consumption, contracts, expiry dates of each vehicle - all of this comes together to manage your corporate fleet efficiently.

Thanks to the installation of a modern **Viasat blackbox**, it will be possible to collect a series of vehicle data, which will then be made available on the **Viasat Fleet WebConsole**. In this way, the localization and traceability of the fleet results in a **more efficient organization**, achieved by optimizing and planning travel activities in the best possible way, promoting a constant and direct dialogue with the staff on the move and **enabling Fleet Managers to do their work optimally**, in maximum economy and safety, which in turn translates into a **significant reduction in operating costs**. In addition, the integration with **Inaz applications** allows you to manage payroll processing and attendance checks automatically and efficiently.

"Today, companies that have personnel on the move are not content with just knowing where they are or what they are doing," **explains Alessandro Peron, CEO of Teamind Solutions, the Viasat Group company which promoted the partnership.** "They need advanced systems to help them automatically manage the fleet and resources deployed on the territory. This is our response: a combined offer that allows the companies that do not have enough time to entrust the operational management of their fleets to two experienced partners such as Viasat Fleet and Inaz, which will take care of everything for them. The client will only have to evaluate the final result.

"The partnership between Viasat and Inaz marks the birth of a complete and powerful tool for the management of company car fleets, conceived starting from the needs of people" **explains Linda Gilli, President and CEO of Inaz.** The multi-level integration with HR management tools simplifies and automates numerous processes, reduces waste and inefficiencies and provides monitoring and analysis tools that support operational and administrative functions. All of this comes with the approach that has always characterized Inaz's HR solutions, in other words simplicity of use, flexibility and accessibility from any device.

***VIASAT** - a European excellence in the field of satellite security systems that integrate the latest IoT and telematics technologies in order to ensure the complete safety of the vehicle and its occupants. It is active in the markets of satellite alarm systems, Insurance telematics, fleet management and Big Data. It is part of Viasat Group which, since 2002, has grown to become one of the economically strongest in our country, boasting a presence in over 50 countries across Europe, Africa, Middle East and South America, with more than 600 employees worldwide. www.viasatonline.it*

***INAZ** - an Italian company specializing in solutions and services aimed at coordinating, managing and organizing corporate work. It designs, creates and markets application software, cloud services, as well as outsourcing and human resource consulting services. With two research and development centers (Milan and Pisa), Inaz is widespread throughout the territory with over 80 software support points, agencies and software partners. Inaz remains close to the best structures - those that recognize the centrality of the human factor: companies, public authorities, professional studios, labor consultants and trade associations. With its Study Center, Inaz is also a point of reference for companies and professionals in the field of refresher courses, consulting and training. www.inaz.it*
